

San Antonio Recovery Center's 2025 outcomes demonstrate strong engagement, low readmissions, and meaningful clinical improvement for high-complexity patients. Results are benchmarked against national data and reflect real-world performance across the continuum of care.

WHO WE TREATED IN 2025

CLINICAL COMPLEXITY AT ADMISSION

Most patients presented with a high level of clinical complexity upon admission.

3 Avg. Diagnoses per Patient

- 76.3%** Multiple ICD-10 Diagnosis
- 48.1%** Dual Diagnosis
- 45.4%** Multiple Substance Use Disorders
- 28.7%** Multiple Mental Health Disorders

CLINICAL MODEL DRIVING RECOVERY OUTCOMES

Designed to support sustained recovery through evidence-based, patient-centered care.

INTEGRATED DUAL-DIAGNOSIS CARE
Treating addiction & mental health together

TRAUMA-INFORMED THERAPY
CBT, DBT, individual & group counseling

MEDICATION ASSISTED TREATMENT (MAT)
Evidence-based medication support

FAMILY ENGAGEMENT
Recovery strengthened through support systems

ALUMNI PROGRAM
Ongoing peer support, sober events, and meaningful connections for lasting recovery.

MULTIPLE RECOVERY PATHWAYS

- Life & Coping Skills Development
- Wellness & Experiential Activities
- 12-Step Support

San Antonio Recovery Center's Continuum of Care

SARC delivers a structured pathway that allows clients to transition between levels of care based on their clinical needs, progress, and recovery goals.

Medical Detox

Safe, medically monitored detox with 24/7 support to help clients begin recovery.

Partial Hospitalization Program (PHP)

Intensive treatment with clinical support as clients transition toward greater independence.

Aftercare Services

Ongoing support designed to strengthen recovery and reduce the risk of relapse.

Residential Treatment

Structured inpatient care focused on stabilization, therapy, and recovery skills.

Intensive Outpatient Program (IOP)

Flexible treatment that allows clients to maintain work, school, and family commitments while continuing care.

HIGH COMPLETION AND LOW AMA RATES

Compared to national aggregate data, more patients successfully complete treatment and fewer leave against medical advice, indicating strong engagement and continuity of care.

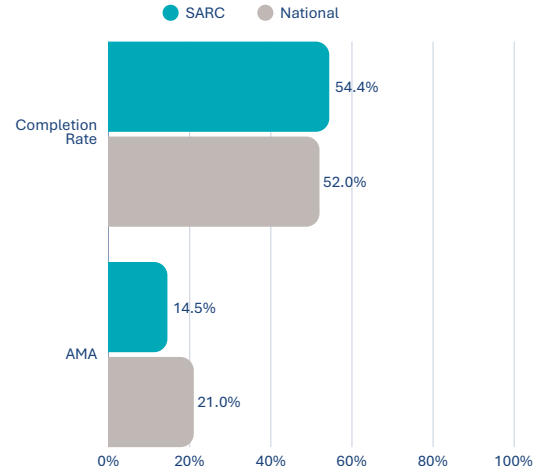

Outperforming National Aggregate Data

COMPLETION RATE

↑ **2.4** Percentage Points Higher

AMA RATE

↓ **6.5** Percentage Points Lower

CLINICAL IMPROVEMENT FROM ADMISSION TO DISCHARGE

Patients demonstrated meaningful improvements in both recovery functioning and mental health symptoms despite higher clinical complexity.

PHQ-9 Improvement

7.8 Percentage Points Higher than National Dataset

PHQ-9 Assessment Scores Over Time

DRIVING VALUE THROUGH TREATMENT OUTCOMES

Reduced High-Cost Utilization

Fewer ED visits & inpatient stays driven by higher retention and completion.

Lower Readmissions Costs

Reduced treatment cycling due to strong engagement and prevents repeat admissions.

Improved Cost Trajectory

Lower downstream spend due to longer, appropriate stays to enable durable recovery.

Greater Value per Episode

Higher completion rates maximize outcomes per dollar spent.

Risk Reduction in Complex Populations

Effective care for high-acuity patients improves outcomes in high-risk groups.
